Together for Digital Care

Rio
District Nursing App

Deliver effective care closer to home - and save your Trust £3.5M

All patient information at your fingertips, integrated with the tools you need to use every day, to deliver care where it's needed in the community.

Overview

At Servelec, we understand the enormous strain district nursing services are under. With increased demand in both the number of people receiving care and the complexity of care provided, we want to help your nursing practitioners to deliver effective care, closer to home, in an efficient way.

By enabling access to relevant patient information, secondary consultations and information across all care settings, our role-based app could mean as much as an hour could be saved each day, per nursing practitioner, through access to relevant information and the ability to update records and view appointments via the app whilst delivering care closer to home.

Our app enables

 Reduced data entry and duplication

 Reduced travel costs – less need to travel back to base

 Savings in printing, posting and archiving of paper records

Go paperless. Make a real difference.

Our role-based mobile app for district nurses makes a real difference by supporting nurses to deliver care to patients within their own homes, and the community, contributing to a safer and more efficient service.

How it works: Information at your fingertips

Our role-based mobile app for district nurses makes a real difference by supporting nurses to deliver care to patients within their own homes, and the community, contributing to a safer and more efficient service. Whether visits are planned or unplanned, our Rio mobile app for district nurses supports nursing teams to deliver care where it's needed – whether at the patient's home or out in the community setting.

Having real-time access to patient information empowers your workforce to deliver the new models of care. Using the integrated features on any smartphone, users can easily access the relevant information and tools they need, for their role, on a mobile device.

Tailored task lists and forms: relevant to the user's role

Record clinical notes and dictation: for example via Siri or Google

Map view of appointments: integrates with smartphone apps to help optimise travel and time

Take photographs: use the mobile phone's camera to take images and store against the patient's record

Key benefits

For Patients:

- Enhanced experience
- Responsive and dynamic service
- Improved outcomes and a higher standard of care, centred on individual needs

For nurses:

- Patient information at their fingertips enabling a fast response and safer decision making
- More time to care for patients

For the Trust:

- Greater efficiency and capacity to deliver more
- Reduced cost of service delivery
- Real-time access to information, empowering your workforce

A paperless NHS could deliver costs savings of

£4.4bn
